US-09-165-042-2
               Sequence 2, Application US/09165042
Patent No. 6100077
GENERAL INFORMATION:
APPLICANT: Sturley, Stephen L.
APPLICANT: Oelkers, Peter
TITLE OF INVENTION: ISOLATION OF A GENE
TITLE OF INVENTION: ACYLTRANSFERASE
FILE REFERENCE: 0575/56331
   CURRENT
                                                                                                                                                                                                                                      1021
                                                                                                                                                                              1081
                                                                                                                                                                                                        513
                                                                                                                                                                                                                                                                  493
                                                                                                                                                                                                                                                                                             961
                                                                                                                                                                                                                                                                                                                                                         901
                                                                                                                                                                                                                                                                                                                                                                                                                 841
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     413
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           661
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     481
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          781
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 721

homeostasis. The present sequence is the coding sequence of human ACAT Related Gene Product 1 (ARGP1). The enzyme encoded by the present sequence is a diacylglycerol acyltransferase (DGAT). ARGP1 does not esterify cholesterol. It is thought therefore that ARGP1 participates in the Coenzyme A-dependent acylation of substrate(s) other than cholesterol e.g. diacylglycerol. Also, ARGP1 has a predicted diacylglycerol binding motif, suggesting that it may perform the last acylation in triglyceride biosynthesis. ARGP1 gene and protein are useful for treating a subject esterification of diglycerol, via gene therapy. Particularly, ARGP1 is useful for treating hypertriglyceridemia, hyperlighdaemia, atherosclerosis, heart disease, obesity or other diseases associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           465

                                                                                                                                                                                                                                            Polynucleotides encoding diacylglycerol acetyltransferase, useful for synthesis of triacylglycerols and increasing the level of oils in plant
                                                                                                                                                                                                                                                                                                                            In the present invention, cDNA libraries from Arabidopsis, corn, rice, soybean and wheat were screened for sequences with homology to a putative acyl COA cholesterol acyltransferase related gene from Arabidopsis thallana and diacylglycerol acyltransferases from Homo sapiens and Mus musculus. The CDNA clones identified from this process were used to form complete diacylglycerol acyltransferase CDNA sequences. The present sequence is corn diacylglycerol acyltransferase CDNA from a contig of clones p0042. cspaf49r, p0122.ckamb5/r and p0125.czaau61rb. Diacylglycerol acyltransferases are involved in the synthesis of triacylglycerols. Alteration of the expression of the diacylglycerol acyltransferase DNA can be useful for increasing the level of oils in plant seeds. Inhibitors of diacylglycerol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           31 GTCTCTTATGCACATACAAATTATGATATAAGGGTATTGTCCAAAAGTACTGAGAAGGGT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TITAATGCTACATCATTGCGAGACTGGCCACTGCTAATGTGTGTTGCCTTAGTCTACCATA 60
                                                                                                                                                                                                                                                                  Polynucleotides encoding diacylglycerol acetyltransferase, useful for synthesis of triacylglycerols and increasing the level of oils in plant
                                                                                                                                                                                                                                                                                                                                                               In the present invention, cDNA libraries from Arabidopsis, corn, rice, soybean and wheat were screened for sequences with homology to a putative acyl CoA cholesterol acyltransferase related gene from Arabidopsis thalian and diacylgiycerol acyltransferases from Homos aspiens and was musculus. The cDNA clones identified from this process were used to form complete diacylglycerol acyltransferase cDNA sequences. The present sequence is corn diacylglycerol acyltransferase cDNA con1. px from a.config of clones cpllc.px(05.h3, cen3n.px(010.c10, col), trom a.config of clones cpllc.px(05.h3, cen3n.px(010.c10, synthesis of triacylglycerol acyltransferases are involved in the synthesis of triacylglycerol. Alteration of the expression of the diacylglycerol acyltransferase bNA can be useful for increasing the level of oils in plant seeds. Inhibitors of diacylglycerol acyltransferase may be useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PheProLeuAlaAlaPheThrValGluLysLeuValLeuGlnLysTyrIleSerGluPro
